

Issued: June 21, 2010 Vol. 4 No. 23

Weekly Rainfall (20 JUN 2010 - 26 JUN 2010)

Weekly Rainfall vs Normal (20 JUN 2010 - 26 JUN 2010)

### Corn

### Soybeans

### Wheat

The grains/oilseeds complex has seen a nice bounce over the last week of trading and overnight markets are showing strength for the open. ProFarmer's crop tour results were published on Friday – in general, they reported that crop conditions for corn and beans are generally better than last year, but caution readers that this does not mean there are no potential problems. They attribute a higher CCI (Crop Condition Index) to earlier planting & good conditions for germination; both factors that were correctly forecast by Weather Trends in our long range outlook for the start of the 2010 season. They also note that many growers are comparing this year to last year, which fares well for users who rely on WTI methods in crop assessments.

\*The risk of loss in trading futures and options can be substantial, therefore only genuine "risk" funds should be used in such trading. Futures and options may not be a suitable investment for all individuals and individuals should carefully consider their financial condition in deciding whether to trade. Option traders should be aware that the exercise of a long option will result in a futures position. Information herein has been obtained and prepared from sources believed to be reliable; however no guarantee to its accuracy is made. Comments contained in these materials are not intended to be a solicitation to buy or sell any of the commodities mentioned. Past performance is not indicative of future performance results. Opinions expressed herein are the options of the author only and not the opinion of any firm the author may be affiliated or associated with.
