

Issued: June 28, 2010 Vol. 4 No. 24

Weekly Rainfall (27 JUN 2010 - 03 JUL 2010)

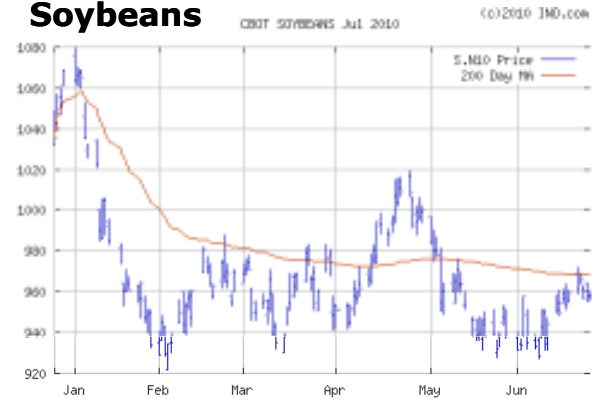

Weekly Rainfall vs Normal (27 JUN 2010 - 03 JUL 2010)

Corn

Soybeans

Wheat

Drier pattern this week will be beneficial to much of the US corn/soybean belt this week following last pattern which brought heavy, and in some cases damaging, precipitation totals last week. So far this season, the overall weather pattern has been favorable for corn and bean development, agreeing with the WTI long range forecast. With weather being positive, the next piece of market-moving news will be the June 30 USDA quarterly report which will contain estimates on stocks. Most analyst surveys indicate higher stocks than last year; this view on supply, when coupled with the strong pattern seen in the early crop, should place some downside pressure on grain/oilseed futures over the coming weeks.

*The risk of loss in trading futures and options can be substantial, therefore only genuine "risk" funds should be used in such trading. Futures and options may not be a suitable investment for all individuals and individuals should carefully consider their financial condition in deciding whether to trade. Option traders should be aware that the exercise of a long option will result in a futures position. Information herein has been obtained and prepared from sources believed to be reliable; however no guarantee to its accuracy is made. Comments contained in these materials are not intended to be a solicitation to buy or sell any of the commodities mentioned. Past performance is not indicative of future performance results. Opinions expressed herein are the opinions of the author only and not the opinion of any firm the author may be affiliated or associated with.
