

Issued: July 05, 2010 Vol. 4 No. 25

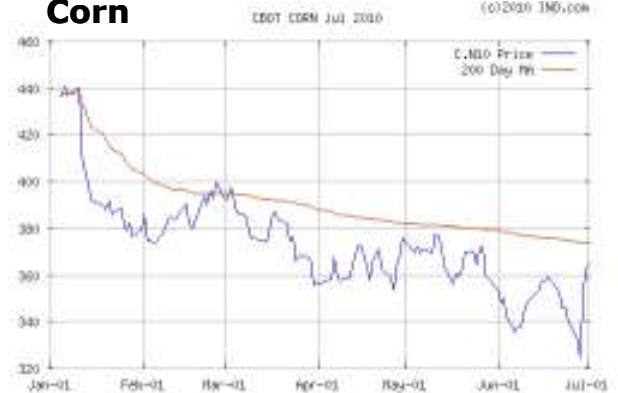

Weekly Rainfall (04 JUL 2010 - 10 JUL 2010)

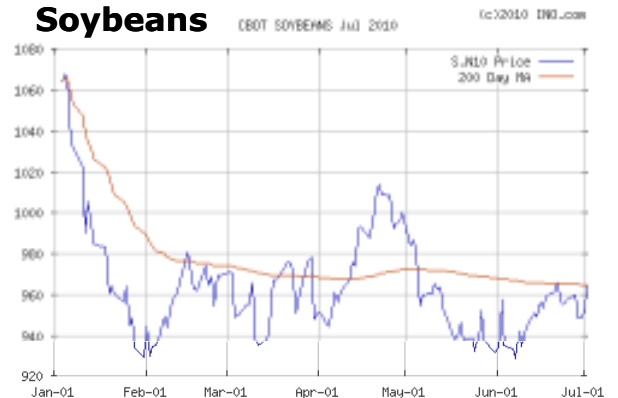

Weekly Rainfall vs Normal (04 JUL 2010 - 10 JUL 2010)

Corn

Soybeans

Wheat

The drier pattern across the US corn & soybean belt last week, helped improve crop status after a few weeks of very wet weather. According to last week's USDA crop update, 73% of US corn was rated either good or excellent, and 69% of soybeans received the same ratings. These were both down slightly (2%) from the week prior, but with the current pattern coupled with the expected outlook for the next 10 days, we are anticipating ratings for both crops to improve. Strength in wheat is expected this week on reports for increased feed demand coming from the livestock sector due to rationing of corn.

*The risk of loss in trading futures and options can be substantial, therefore only genuine "risk" funds should be used in such trading. Futures and options may not be a suitable investment for all individuals and individuals should carefully consider their financial condition in deciding whether to trade. Option traders should be aware that the exercise of a long option will result in a futures position.
