

Issued: July 12, 2010 Vol. 4 No. 26

**Corn**

**Soybeans**

**Wheat**

Last week's USDA release showed that US stocks for corn are larger than most analyst's expectations. USDA estimates for global wheat stocks were cut, prompting a strong response in futures, and follow-through activity is expected at the start of the week. For the coming week, the US corn/soy belt will see some warmer temperatures, particularly in the western belt, but they will not be high enough for a sustained period to cause a significant for either crop. Currently, we are seeing an extended dry pattern in China, which should support soybeans in this week's trading.

\*The risk of loss in trading futures and options can be substantial, therefore only genuine "risk" funds should be used in such trading. Futures and options may not be a suitable investment for all individuals and individuals should carefully consider their financial condition in deciding whether to trade. Option traders should be aware that the exercise of a long option will result in a futures position. Information herein has been obtained and prepared from sources believed to be reliable; however no guarantee to its accuracy is made. Comments contained in these materials are not intended to be a solicitation to buy or sell any of the commodities mentioned. Past performance is not indicative of future performance results. Opinions expressed herein are the options of the author only and not the opinion of any firm the author may be affiliated or associated with.
