

Issued: July 26, 2010 Vol. 4 No. 28

Weekly Rainfall (26 JUL 2010 - 01 AUG 2010)

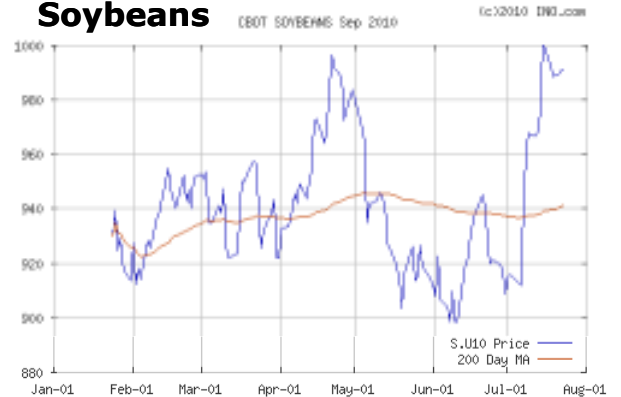

Weekly Rainfall vs Normal (26 JUL 2010 - 01 AUG 2010)

Corn

Soybeans

Wheat

We've seen dramatic spikes in both corn & wheat – this week it may be time for corn to pop. The story in the corn/soy belt this week will be rain (particularly in the WCB). While overnight markets are lower, we expect to see support to the upside at the start of the week on the forecast for additional rains, which will add to the uncertainty following significant flooding which affected parts of IA/IL. This week does not look to be particularly heavy, but the best thing for the crops right now is clear skies to help dry fields; long-term, the rains are probably a favorable factor for the crop.

*The risk of loss in trading futures and options can be substantial, therefore only genuine "risk" funds should be used in such trading. Futures and options may not be a suitable investment for all individuals and individuals should carefully consider their financial condition in deciding whether to trade. Option traders should be aware that the exercise of a long option will result in a futures position. Information herein has been obtained and prepared from sources believed to be reliable; however no guarantee to its accuracy is made. Comments contained in these materials are not intended to be a solicitation to buy or sell any of the commodities mentioned. Past performance is not indicative of future performance results. Opinions expressed herein are the opinions of the author only and not the opinion of any firm the author may be affiliated or associated with.
