

Issued: September 28, 2009 Vol. 3, No. 35

Weekly Min Temperature vs Normal (27 SEP 2009 - 03 OCT 2009)

Overnight activity seeing some upside pressure for C,B,W; in particular, the weather pressure is noted in soybeans where last week's rain resulted in some widespread harvest delays. This week, we do need to keep an eye out for potential frost threat (western belt), although the threat is probably lower than last week. Nonetheless, we do anticipate another choppy week, with most of the volatility seen in beans. We feel that some of the cooler and wetter weather that we have seen in September will start to bring some of the yield expectations down, particularly with reference to the corn crop. Our yield expectations are up slightly for corn (156.4 – 158.9) bu/acre and remain the same for soybeans (41.5 – 43.5 bu/acre).

\*The risk of loss in trading futures and options can be substantial, therefore only genuine "risk" funds should be used in such trading. Futures and options may not be a suitable investment for all individuals and individuals should carefully consider their financial condition in deciding whether to trade. Option traders should be aware that the exercise of a long option will result in a futures position.
